

EXPERIENCE THE EXCEPTIONAL

# Mixer Seals

Seal range designed for mixers, agitators and reactors

the AESSEAL® group of companies

designers and manufacturers of mechanical seals,  
bearing protectors and seal support systems  
which maximize rotating equipment up-time.

[www.aesseal.com](http://www.aesseal.com)

## Company Overview

AESSEAL® is a leading global specialist in the design and manufacture of mechanical seals, bearing protectors and seal support systems.

The company sets new standards in reliability, performance, service and cost. Service has been the key to the success of AESSEAL® and is at the core of the company purpose statement — **'to give our customers such exceptional service that they need never consider alternative sources of supply.'** Through continuous investment, unique modular technology and an unparalleled dedication to customer service we aim to constantly exceed expectation.

## Customer Focus

"We aim to deliver a customer experience that surpasses expectation and truly redefines what the world expects from their sealing specialist."

**Simplicity.** Our modular technology means a streamlined ordering process.

**Customer-centric.** Our people are encouraged to champion the customers' cause.

**Ethical and responsible.** AESSEAL® has been recognized as a Climate Change Champion and has won awards for corporate social responsibility and sustainability.

**Partnership.** We work with customers to deliver added value and long-term reliability solutions.

**Investment.** Over 7% of annual sales revenue has been reinvested in R&D over several decades. This has almost certainly led to the most advanced range of sealing technology available globally.

## Engineered Excellence

AESSEAL® offers a complete product range to seal Mixers, Agitators and Reactors.

- Hydraulically balanced for reduced seal-face loading which maximizes seal life and allows for vacuum service capability
- Unitized design for ease of installation
- Non-fretting design to reduce cost in equipment overhaul
- Modular designs for improved versatility

The range of AESSEAL® Mixer mechanical seals are designed for mixers, agitators, reactors and dryers.

Mixing applications vary from simple blending or solid dissolution to the more exacting standards of solids suspension, gas dispersion or containing / promoting chemical reactions.

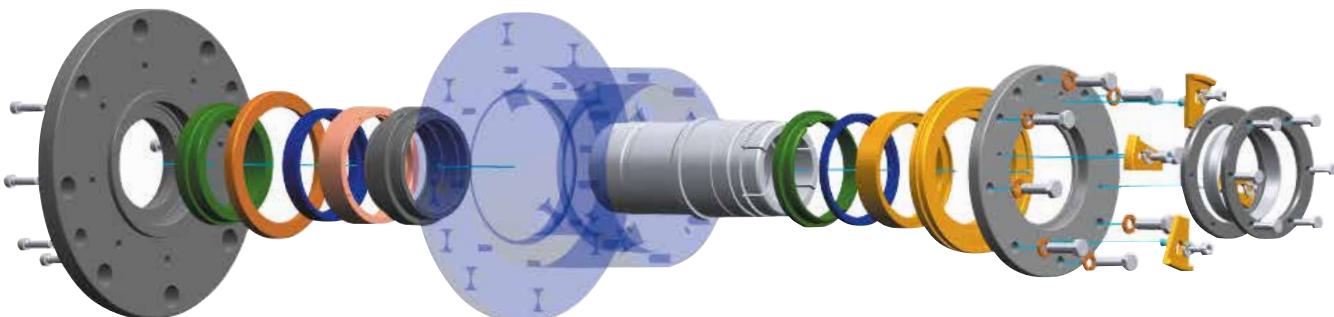

Mixers are used in the food, beverage and pharmaceutical industries, yet generally the chemical and process industries have the most varied and difficult mixer problems and therefore require precise sealing technology. The AESSEAL® Mixer seal range ensures that the most demanding applications can be accommodated. For more information this brochure can be downloaded from the AESSEAL® website at [www.aesseal.com](http://www.aesseal.com).

## Development Background

The AESSEAL® Mixer range was developed only after extensive performance and field evaluation tests, conducted over many years.

The range has been created using the latest Computer Aided Design and manufacture programs including Finite Element Analysis.

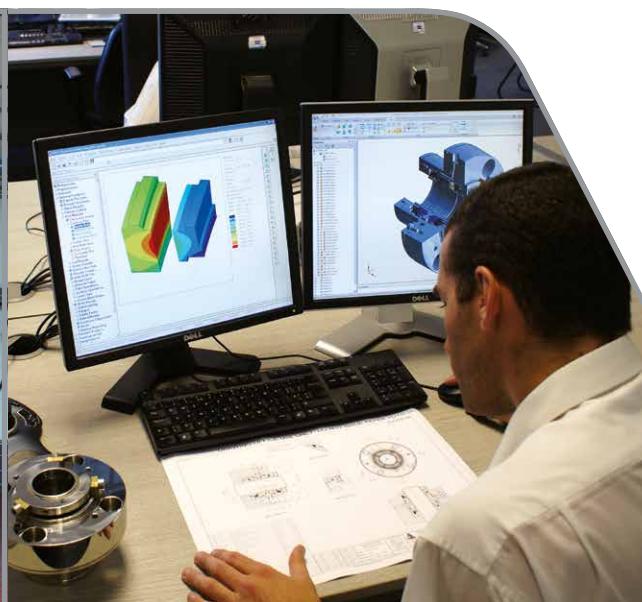

These programs help to predict how the seals can be produced and also how they will perform under various application conditions. This technology has vastly reduced the lead time for product development and thus reduced the overall cost of the seal range.

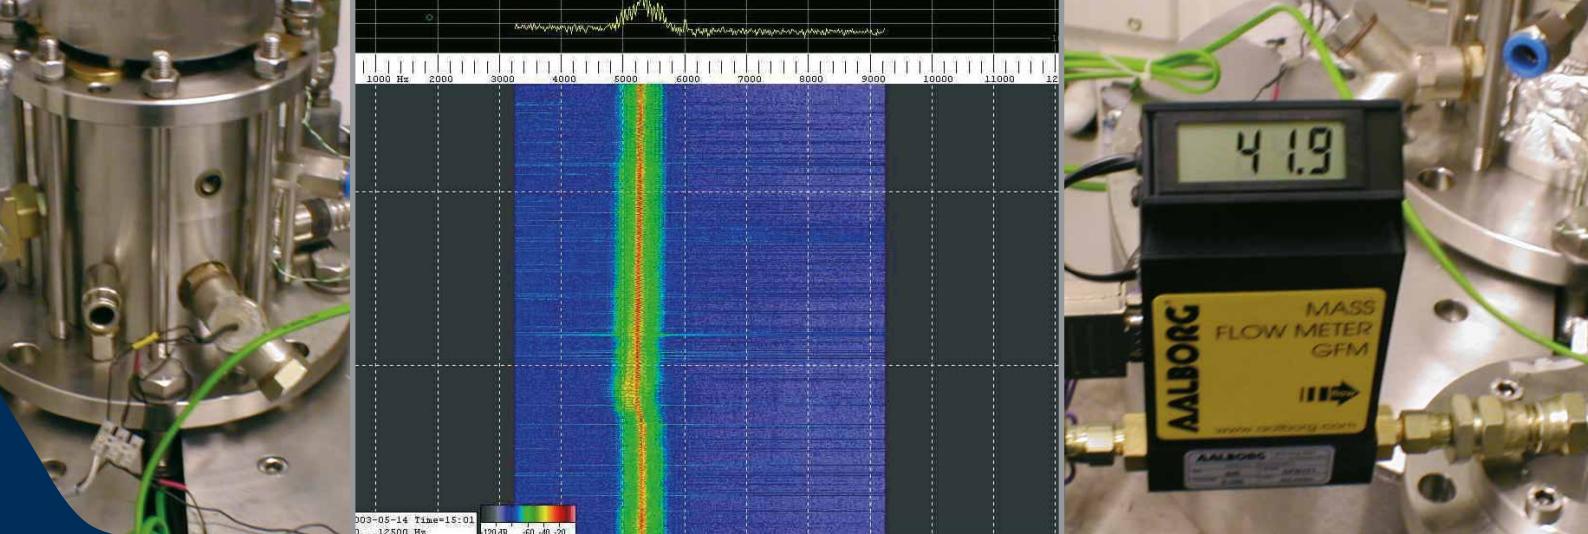

Exploded view of a Mixmaster IV™

Massive investment in Computer Aided Design, manufacture and PDM (Product Data Management) helps to ensure that the seal is fit for the purpose.

Computer simulation is very effective for evaluating seal performance, however, all AESSEAL® mechanical seals still have to undergo physical testing in various hazardous conditions.

Sound level metering, spectrum analysis, gas flow and temperature instrumentation and continuous data logging software

The AESSEAL® Mixer range has been developed following an extensive performance evaluation test program over an 18 month period.

The dry running seal technology, specifically the seal face geometry, damper and close coupled devices, have been created using the latest Computer Aided Design, Manufacture and simulation software.

The product range has been verified and performance optimized using sound level metering, spectrum analysis, gas flow and temperature instrumentation and continuous data logging software. The result is a range of inventoried, patent pending mechanical seals, which extend the boundaries of conventional products, allowing wider application of the technology and benefits.

Various applications, such as horizontal drying, preclude the use of a liquid barrier fluid due to process contamination possibilities.

In such applications, the attraction of an inert non-contaminating barrier fluid is clearly advantageous. By far, the largest demand for gas barrier systems is in the food and pharmaceutical industries. As such, AESSEAL® has developed a range of dry running mechanical seals and seal support systems for such applications and industries.

ATEX certification available, contact AESSEAL®

## ESM™ - External Seal for Mixers

The AESSEAL® ESM™ is a unit external seal designed for ease of installation as the faces are clipped together and despatched assembled in a leak free state.

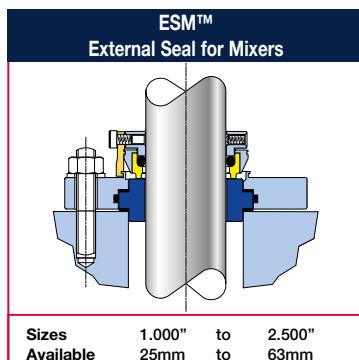

The standard ESM™ seal is driven through socket set screw clamping, with a Carbon / Ceramic seal face combination and a gland which is designed to suit the customer's equipment. All wetted parts are non-metallic, therefore, the seal is ideally suited for corrosive vapour applications commonly found in Top Entry Mixers.

- Balanced seal face design
- Modular design
- Unit designed for ease of installation
- ESM™, ESCM™, ESTM™, ESCTM™ non-metallic wetted design
- NCM™ non-chemical design
- Springs out of product
- Seal flange manufactured to suit equipment

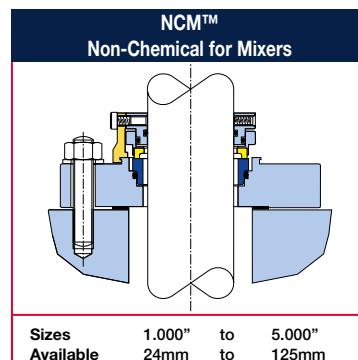

**NCM-DW External Seals for Mixers.**

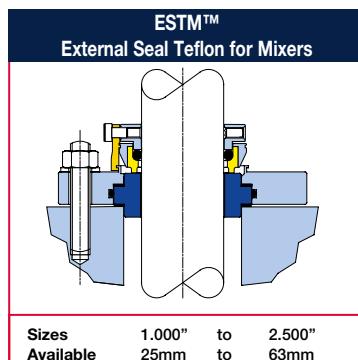

The seal can be used in sterile application particularly suited in the food & Beverage along with the Pharmaceutical sectors.

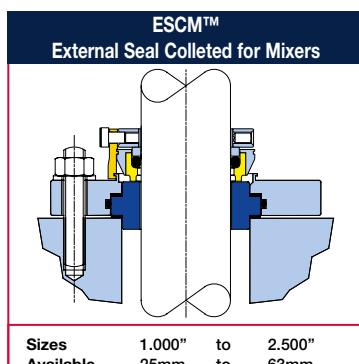

Designed for ease of installation the ESM™ has non-metallic wetted parts and is therefore ideally suited for corrosive vapour applications commonly found in Top Entry Mixers.

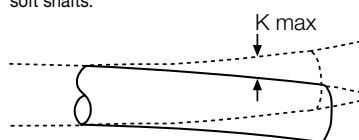

The NCM™ is an external seal unit designed for ease of installation, as the faces are clipped together and dispatched assembled in a leak free state. Some wetted parts are metallic, therefore the seal is unsuited for some severe corrosive applications.

A sister variant on the ESM™, the ESTM™ replaces the Carbon / Ceramic face combination with Teflon (P.T.F.E.) / Ceramic, for applications where Carbon is not compatible with the process fluid.

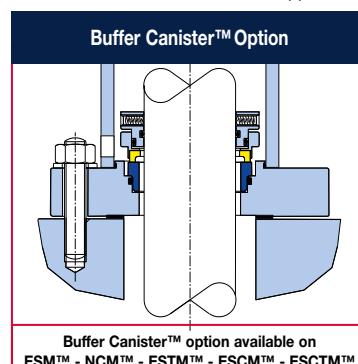

The ESCM™ employs the same seal principles as the ESM™ except for the clamping device. The ESCM™ utilizes a collet clamp ring making the unit particularly applicable to hard and soft shafts.

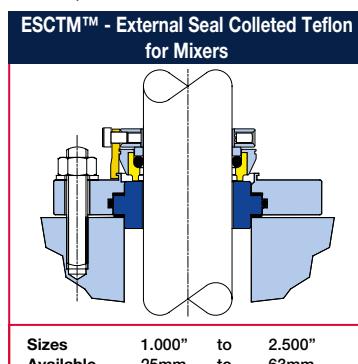

**ESM™ - ESCM™ - ESTM™ - ESCTM™**

Seal Size	T.I.R. (K max)
1.000" to 1.500"	0.030"
25mm to 38mm	0.8mm
1.625" to 2.500"	0.040"
40mm to 63mm	1.0mm

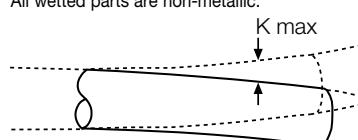

The buffer canister option is available on both the ESM™ and NCM™ range of unit seals. The simple design can be of an open or closed top construction and slides over the external seal. An O'ring is then placed in the clip groove to prevent leakage. The fluid in the canister "bathes" the seal faces and therefore is applicable for the dry running applications which are commonly found in top entry mixers.

Seal Type	Face Availability	Drive
ESM™	CAR - CER	Standard
ESCM™	CAR - CER	Collet
ESTM™	PTFE - CER	Standard
ESCTM™	PTFE - CER	Collet
NCM™	Rotary Face Car - SIC - TC Stationary Face CROX-CER-SIC-TC	Standard

A hybrid unit seal of the previous options. The ESCTM™ offers a Teflon / Ceramic face combination, collet clamping and gland designed to suit the customer's equipment. All wetted parts are non-metallic.

**NCM™**

Seal Size	T.I.R. (K max)
1.000" to 2.375"	0.040"
24mm to 60mm	1.0mm
2.500" to 5.000"	0.060"
40mm to 63mm	1.5mm

## Mixmaster I™ - CSWIB™

The AESSEAL® Mixmaster I™ is a single cartridge mechanical seal, with balanced seal faces and an integral (steady) bearing.

The Mixmaster I™ can be ordered in types B, C & D in a variety of gland combinations concerning flush, quench, drain and grease connections and also different face combinations. The gland plate is machined to meet the customer's requirements with respect to outside diameter, bolt circle diameter and stuffing box location.

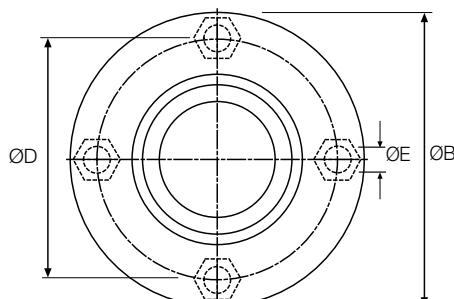

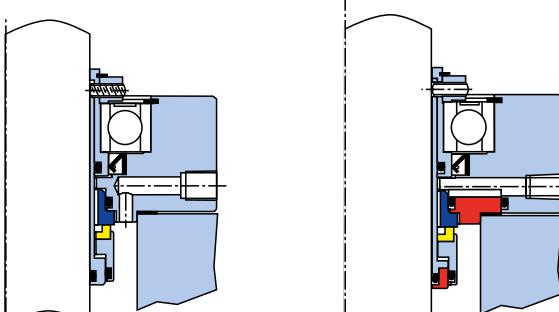

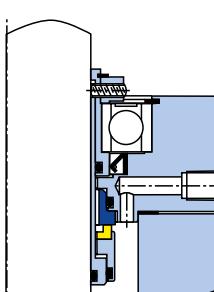

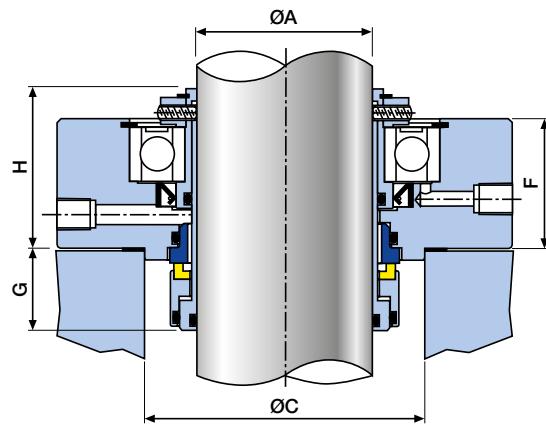

**CSWIB™ - Dimensional Information (inches)**

## Mixmaster II™ - DSWIB™

The AESSEAL® Mixmaster II™ is a double cartridge seal with integral bearing design with concentric faces so that the seals overall length is reduced.

### The CSWIB™ & DSWIB™ are offered with the following features:

- The integral bearing (pre-installed) is designed as a steady bearing and may not take the full radial load applied to a mixer
- Quench drain & grease connections as standard
- Available with flush connection (type 'C' only)
- No shaft fretting
- Balanced seal faces
- Non-clogging rotaries
- Most suitable for low shaft speeds
- Supplied with high tensile, corrosion resistant socket set screws

The Mixmaster II™ can be ordered in types B, C & D.

Like the Mixmaster I™, the Mixmaster II™ seal is manufactured from a fully machined gland, to the customer's specification.

**Note:** All face combinations up to 3.250" are standard AESSEAL® face materials. Contact the AESSEAL® technical department for hard face options above this size.

## CSM™ - Cartridge Single for Mixers

The AESSEAL® CSM™ is available in a wide range of seal face, elastomer and alloy combinations, to suit individual applications.

Single cartridge seal for mixers / agitators.

Designed to run in vapour on vertical applications, with low emissions.

Seal sizes from 130mm to 300mm are designed to suit specific equipment using modular components.

Contact AESSEAL® technical department for dimensional information and availability.

† = F Min + K Max

The graph above shows emissions (in PPM methane equivalent) on day 21, the final 15 minutes of testing for a CSM™ - 60mm - Carbon / Silicon Carbide faces.

Excessive radial shaft movement, combined with high rotation speeds and/or adverse fluid characteristics, may compromise the 'leak-free' sealing ability of any mechanical seal.

## CDM™ - Cartridge Double for Mixers

The AESSEAL® CDM™ is available in a wide range of seal face, elastomer and alloy combinations, to suit individual applications.

Double cartridge seal for mixers / agitators.

## DMSC™ — Double Monolithic Stationary Convection

Double Cartridge seal for mixers used where a larger barrier differential pressure is required.

The DMSC™ seal design was created as a result of a request from a major AESSEAL® customer who required a seal design features which was not satisfied by one existing AESSEAL® product. New and novel patented features were developed, helping to ensure that the final product would excel in some of the most difficult and arduous applications found on-site

### Features:

- Monolithic seal faces provide maximum face stability in high temperature applications.
- Seal face drive over large contact area prevents damage to faces in stop / start applications.
- Large 3/8" NPT seal gland ports maximize cooling potential and extend seal life
- Hydraulically balanced seal-face technology for reduced power consumption with the ability to withstand pressure fluctuations
- Stationary design is suitable for high speed applications
- Sizes available from 1.000" to 5.000" (24mm - 125mm)

### DMSC™ Standard ISO / ANSI Box Bore 24.0mm - 70mm (1.000" - 2.750")

## SCMS™ Short Canister Mixer Seal

Designed specifically for Mixer, Agitator and Reactor applications.

Available from 30mm to 220mm (1.250" to 8.625")

- Double and Single Seal for both modern and mature mixer designs
- Suitable for both top or side entry applications
- Reduced height - ideal in situations where space is limited
- Dual Balanced Design - maintains containment through a range of process fluctuations
- Fail safe protection - Independent seal face loading using unique common multi-spring design (Patent Pending)
- Accommodates up to 3.5mm of radial (T.I.R.) movement (size dependant)
- Self Adjusting Axial Movement Compensation - common multi-spring design maintains precise face loading to both sets of seal faces (Double Seal Only)
- Monolithic seal faces (Double Seal Only)
- Available with optional modular bearing assembly
- Optional water cooled mounting flange to extend ATEX limits
- Engineered solutions available
- Certifications Available:
  - ATEX Zone 0/20, 1/21 & 2/22
  - FDA Compliant materials

### SCMS™ – Short Canister Mixer Seal Wet or Dry Contacting Version

The SCMS™ Mixer seal is specifically designed for use on a broad range of mixers, agitators and reactor applications. It is suitable for side entry (flooded) or top entry (running in vapour) mounting. The modular SCMS™ design facilitates both wet and dry running versions.

**SCMS - W** seal is a traditional wet seal arrangement intended for use with a API Plan 53A or 54 seal support system

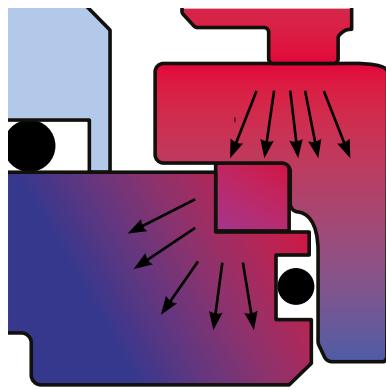

**SCMS - D** is a dry running contacting configuration intended for use with a API Plan 74 seal support system

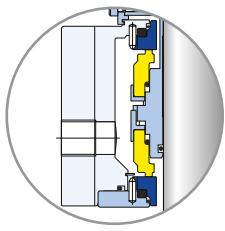

SCMS™ ATEX Zone 0  
(shown with Taper Lock Clamp Ring option)

FEA Optimized seal face for  
stable dry running

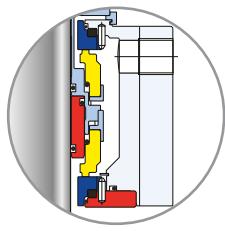

Conductive wedges used to assist  
heat dissipation

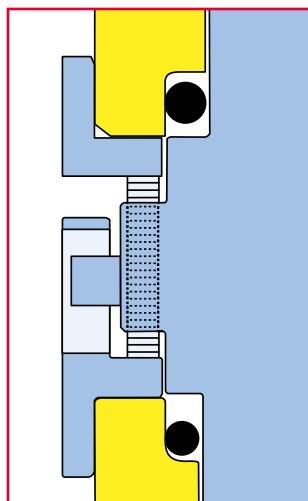

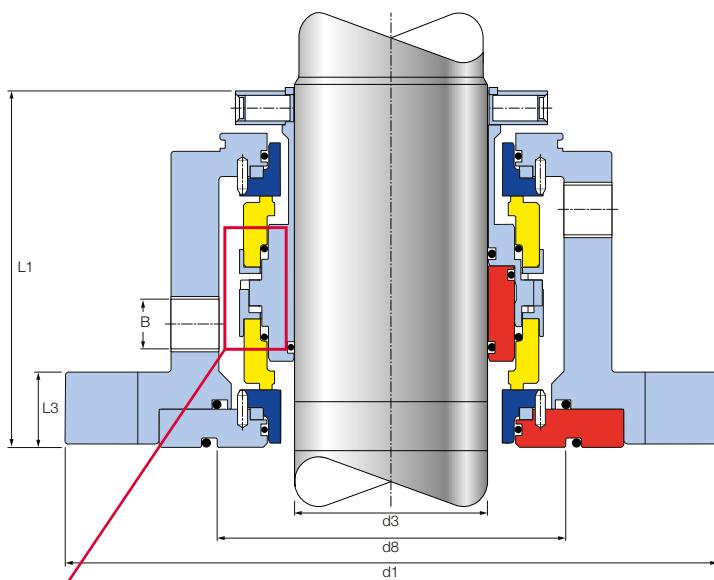

**SCMS™ 30mm - 40mm**  
(**1.125"** to **1.500"**)

**SCMS™ 50mm - 125mm**  
(**2.000"** to **5.000"**)

**SCMS™ 30mm - 40mm**  
(**1.125"** to **1.500"**)

### Face Options

#### Inboard

Resin Impregnated Carbon / SiC, SiC / SiC (SCMS-W)  
Dry Running Carbon / SiC (SCMS-D)

#### Outboard

Resin Impregnated Carbon / SiC, (SCMS-W)  
Dry Running Carbon / SiC (SCMS-D)

#### Elastomer options

Viton (Standard), EPR, Aflas, Kalrez

#### Gasket options

O'Ring (standard), AF1, GFT

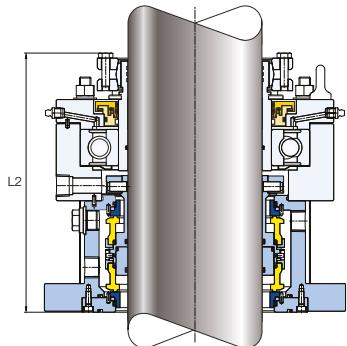

#### Shaft clamping

Clamp ring with set screws (standard)

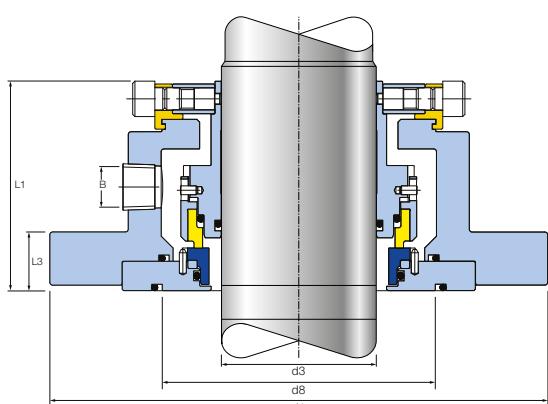

#### Options

Taper lock clamp ring, Exotic product-wetted metallurgy, Water cooled mounting flange

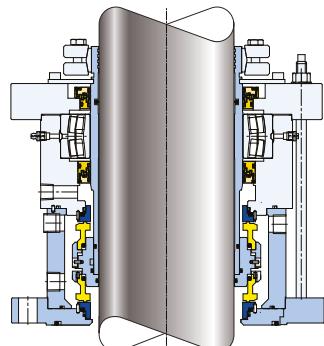

**Independent seal face loading using common multi-spring design**

**Optional modular bearing assembly**

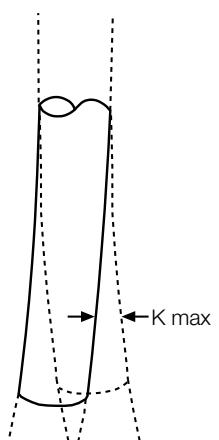

**SCMS™ single seal option**

**160mm-220mm**  
(**6.250"** to **8.625"**)

Other sizes available. Contact your nearest AESSEAL® office for availability.

\* Large size SCMS™, Sizes 160mm – 220mm (6.250 - 8.625") are designed to order and are not inventoried.

Contact AESSEAL® technical department for information and availability.

# Mixmaster IV™

The seal range is offered with the following design features:

- Designed for mixers, agitators and reactors
- Double hydraulically balanced seal faces
- Available with non-metallic wetted components
- Cartridge seal with integral load carrying bearing to DIN 28 138 parts 1 and 2
- Available to suit any shaft (within the size range)
- No shaft fretting

## Specifications Mixmaster IV™

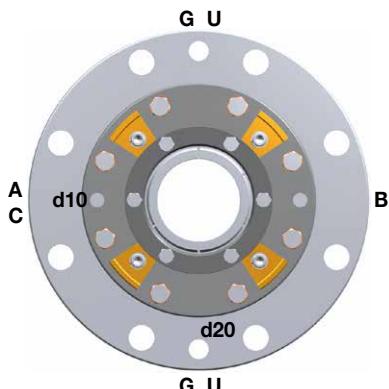

The Mixmaster IV™ Range of Mixer Seals conform to the following relevant DIN Specifications.

<b>DIN 28 138 part 1</b>	- Stainless Mixer Seal
<b>DIN 28 138 part 2</b>	- Glass Lined
<b>DIN 28 138 part 3</b>	- Screwed Connection Designation & Position
<b>DIN 28 137 part 2</b>	- Glass Lined Mounting Flanges
<b>DIN 28 141</b>	- Stainless Steel Mounting Flanges
<b>DIN 28 154 &amp; 159</b>	- Shaft Dimensions

## Environmental Connections

The Mixmaster IV™ connections are positioned in accordance with DIN 28 138 part 3.

## Mixmaster IV-II-BS™

The Mixmaster IV™ is a fully customizable top entry seal designed in accordance with DIN 28 138.

- Top entry seal design
- Double hydraulically balanced inboard seal faces
- Conforms to DIN 28 138 Part 1 and DIN 28 141
- Modular design
- Available to fit any shaft size within the seal range
- Connections positioned in accordance with DIN 28 138 Part 3
- Integral load carrying bearing
- Metallic wetted parts

# Mixmaster IV-II-BG™ Glass (Enamel) Lined

- Top entry seal design
- All wetted parts are non-metallic
- Double hydraulically balanced inboard seal faces
- Conforms to DIN 28 138 Part 2 and DIN 28 137 Part 2
- Modular design
- Available to fit any shaft size within the seal range
- Connections positioned in accordance with DIN 28 138 Part 3
- Designed to order with exotic alloy wetted materials including Alloy C276 / Titanium / Alloy 20
- The flange can be designed to suit customer specific equipment

**Flanges Nominal Diameters E700-E901**

## Mixmaster V™ – Internal Balanced Mechanical Seal

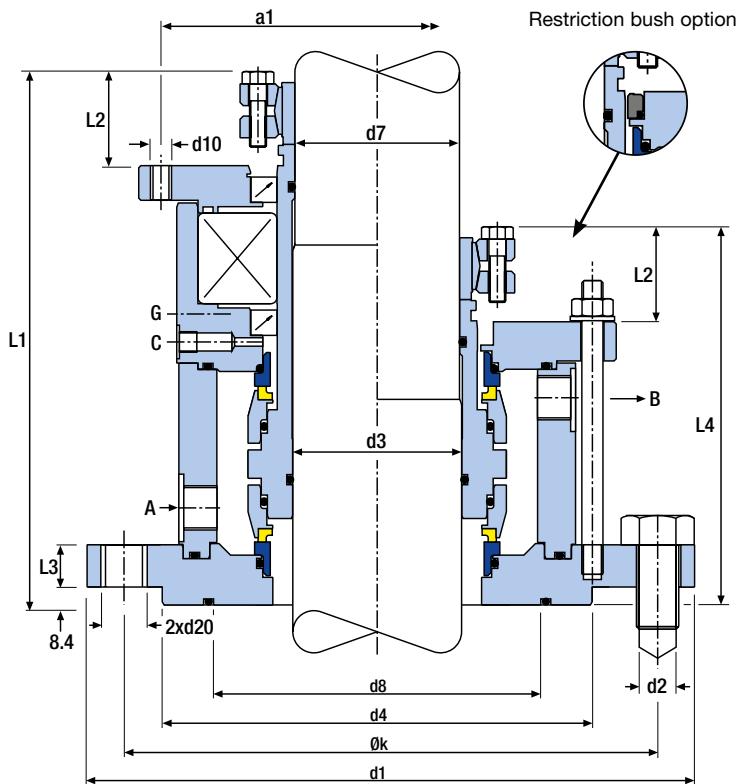

The Mixmaster V™ is a value for money, modular design with balanced seal faces and an integral load carrying bearing.

The seal is designed in accordance with DIN 28 138. The Mixmaster V™ is a standard design which cannot be customized.

**The seal is offered with the following features:**

- Top entry seal design
- Designed for mixers, agitators and reactors
- Balanced seal faces for the barrier fluid (Mixmaster V™)
- Cartridge seal with integral load carrying bearing to DIN 28 159
- No shaft fretting
- Modular design
- Seal faces remain closed in reverse pressure conditions

**NOTE:** The mounting flange is designed to DIN 28 138

**Mixmaster V-II-BS™ Dimensional Information (mm)**

Dimensional information on larger sizes is available on request.

The seal range is also available without the bearing assembly, as shown on the right hand side of the above diagram. A single seal option which includes the bearing is available on request.

# Mixmaster VI™

The Mixmaster VI™ uses the modular components of the Mixmaster V™ and incorporates double balanced seal faces.

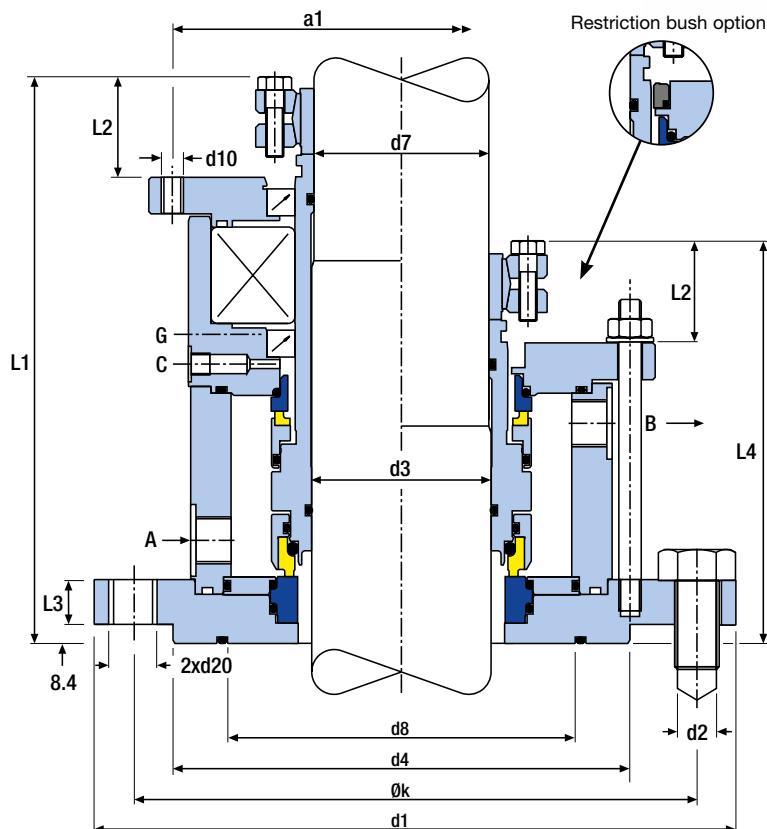

The seal is designed in accordance with DIN 28 138. The Mixmaster VI™ is a standard design which can only be customized in 3 ways: 1 - thick sleeve, 2 - flange modification, 3 – exotic alloy wetted components.

For any other modifications refer to the Mixmaster IV™ design.

## The seal is offered with the following features:

- Top entry seal design
- Designed for mixers, agitators and reactors
- Double balanced inboard seal faces (Mixmaster VI™)
- Cartridge seal with integral load carrying bearing to DIN 28 138 parts 1 & 2
- No shaft fretting
- Modular design

**NOTE:** The mounting flange can be supplied to suit customer equipment

## Mixmaster VI™ Flange Options

Extensive design modularity has been incorporated into the standard Mixmaster VI™ range.

In addition to the standard stainless steel flange design, AESSEAL® offers four further alternates as shown below.

### Debris Flange

In some applications, particularly in the food or pharmaceutical industries, an in-place cleaning operation such as CIP is required.

In addition to this, often on vertical applications, carbon seal face debris is not permitted to enter the process media.

The Debris Flange with optional deflector arrangement is offered to facilitate such process requirements.

### Cooling / Heating Flange

Changing the seal environment is often key when sealing difficult applications.

The Cooling / Heating flange option allows the temperature at the seal faces to be controlled, thereby helping to extend seal life in some difficult thermal applications.

### Non-Metallic Flange

To complement the non-metallic product offering, AESSEAL® offers inventoried enamel flanges conforming to DIN 28 137 part 2.

The Mixmaster VI™ non-metallic design also allows the cartridge seal to be removed and replaced without disturbing the enamelled flange. Cooling option available

### Exotic Alloy Flange

The standard Mixmaster VI™ Exotic flange option is designed to DIN 28 141 and offered in any commercially available material including Alloy C276 and Titanium.

While some DIN style Stainless Steel, enamel and exotic flanges are inventoried, most flanges are made to suit customer requirements.

# MIXMASTER VII™

Range of Mixer, Agitator, Reactor & Dryer  
Seals for Dry Running Applications

The seal range is offered with the following design features:

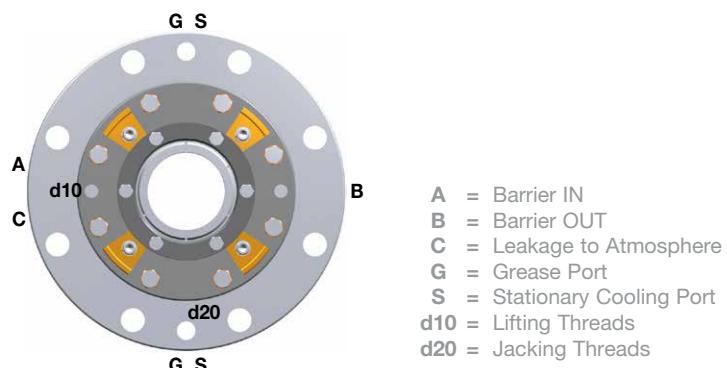

- Designed for mixers, agitators, reactors and dryers
- Specifically for dry nitrogen applications to 10 barg (150 psig)
- Double hydraulically balanced seal faces
- Available with non-metallic wetted components
- Cartridge seal with integral load carrying bearing to DIN 28 138 parts 1 and 2
- No shaft fretting and available to suit any shaft (within the size range)

## Specifications Mixmaster VII™

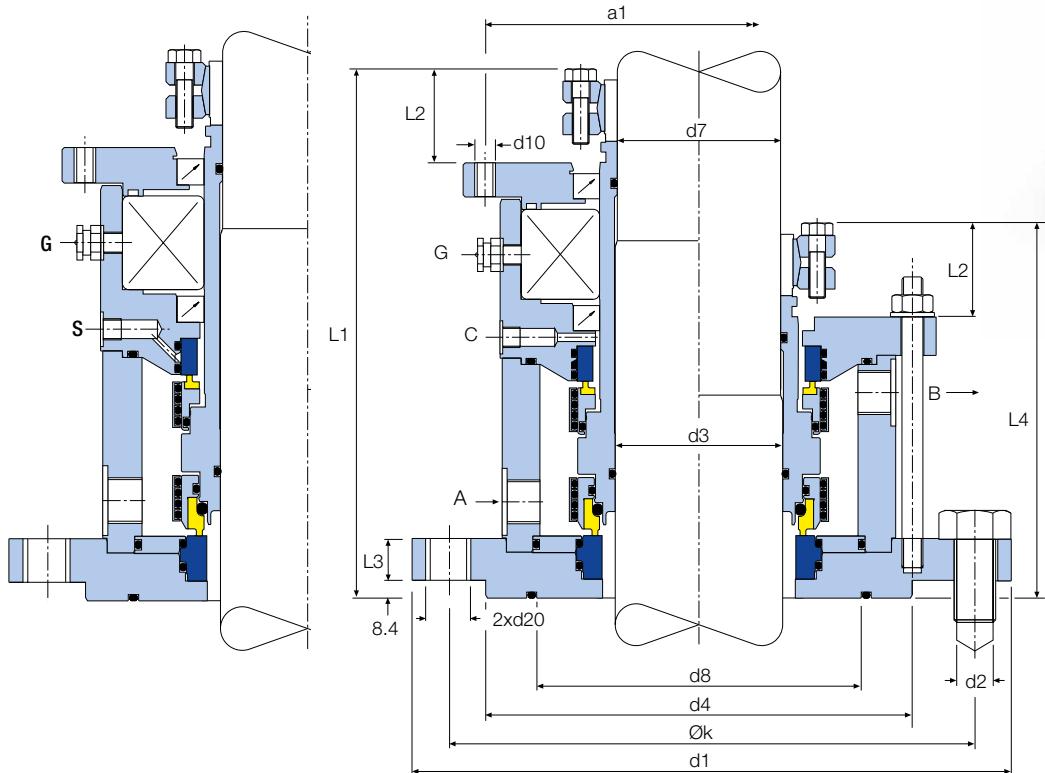

MIXMASTER VII™ Load Carrying Capabilities

### Mixmaster VII™ Imperial Size Information

The modular design of the Mixmaster VII™ enables the product to be offered to suit ANY shaft size. The table below shows the inch size range. Larger sizes up to 300mm (12.000") are designed to order.

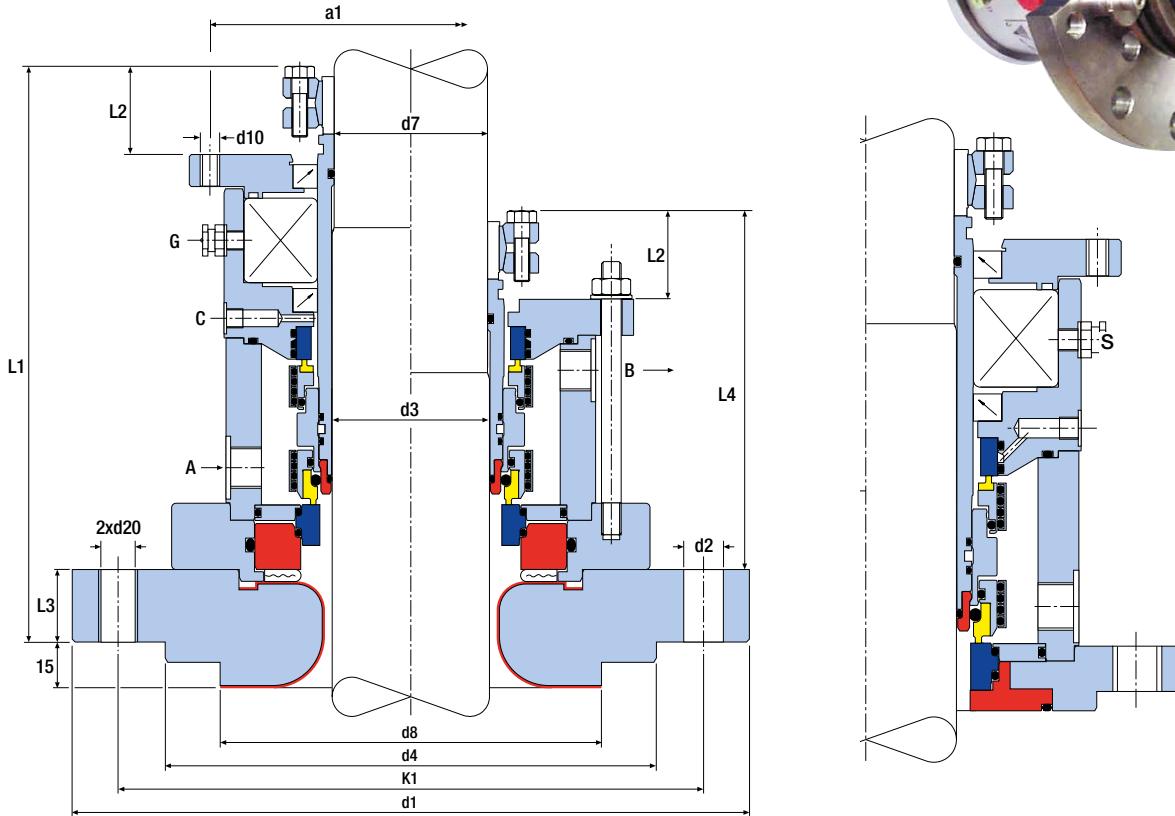

### Mixmaster VII™ Stainless Steel Dimensional Information (inches)

## Mixmaster DGS

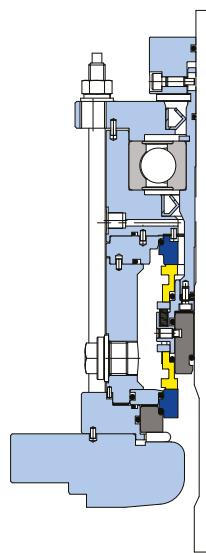

The Mixmaster DGS is a cartridge double back-to-back pusher seal with integral deep groove ball bearing. It is gas lubricated, non-contacting, inboard and outboard design, running on a supplied barrier gas at a pressure greater than the sealed process pressure.

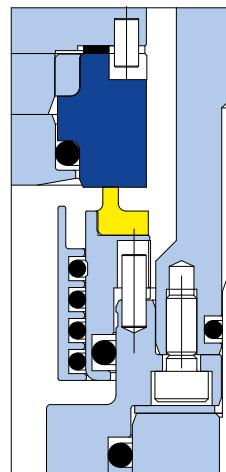

The non-contacting nature of the design ensures long life, low power consumption and reduced capital cost for support systems. Also, a non-contacting inboard and outboard ensures 100% product purity with no process contamination, as well as eliminating contact and creating a wear free environment.

Stainless steel option

Glass lined option

Dry-running contacting outboard face option

### Conforms to:

- DIN 28 138 part 1** - Stainless Mixer Seal
- DIN 28 138 part 2** - Glass Lined
- DIN 28 138 part 3** - Screwed Connection Designation & Position
- DIN 28 137 part 2** - Glass Lined Mounting Flanges
- DIN 28 141** - Stainless Steel Mounting Flanges
- DIN 28 154 & 159** - Shaft Dimensions

### Key Features

- Double mixer seal
- Inboard and outboard non-contacting gas lift faces
- Option with outboard contacting dry-running faces considered upon application
- Integral radial and axial load carrying deep groove ball bearing
- Face design optimized and calibrated for minimum barrier gas consumption
- Seal face materials conform to FDA and EU 1935/2004 legislation
- Uni-directional groove profile as standard and Bi-directional groove profile optional
- Available with metallic or non-metallic wetted components

## Engineered Specials for Filter Dryer

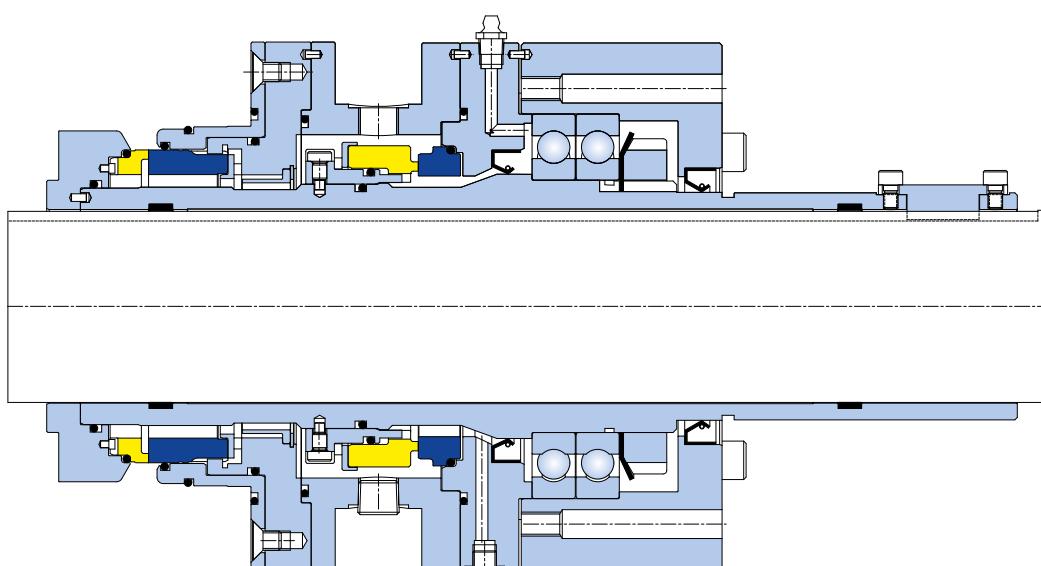

Cartridge mounted dual rotary design seals with multi-spring pusher type sealing elements. The seal is of a non shaft-fretting design, fully hydraulically balanced, with the springs (constructed in Alloy 276) out of the product.

The seal comes complete with a unique fully machined gland and a sleeve end cap designed to accommodate the filter dryer shaft bellows and the axial movement of the filter dryer shaft.

The seal elements are designed to allow a CIP process and as part of the design an integral steady bearing is included to allow maximum seal face support. As standard, the seal is supplied with NPT barrier in and barrier out connections to allow the use of the gas barrier system.

### Features and Advantages

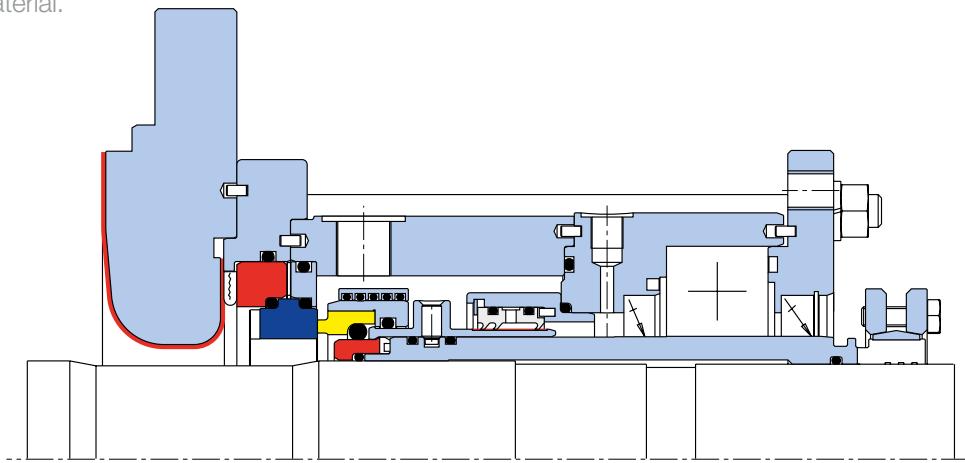

- Elastomer groove design enables effective CIP cleaning with minimal / no debris entrapment
- Springs are removed from the process fluid ensuring that the process cannot clog or cause hang up of the dynamic O'rings
- Face design is optimized using FEA techniques. Faces are designed to run in compression under normal operating conditions and remain parallel at all times
- The design is repair friendly as all seal faces are monolithic and can be removed with simple hand tools, a full spares kit can be fitted in a short space of time unlike, shrink fit designs
- Designed specifically for pharmaceutical duties with CIP requirements
- Optional bi-metal wetted parts construction. The internal stationary face holder incorporated large anti rotation mechanism for robust face drive integrity
- Seal drive is provided by a key drive mechanism to provide positive radial drive whilst still allowing the axial movement of the shaft during the drying cycle
- Fully integrated bearing arrangement to provide support to the sleeve mechanism, thereby improving face integrity

## Glass lined Mixmaster with CLIP™

Mixmaster seals using CLIP™ inboard and out board sealing technology for the food and pharmaceutical industrial sectors.

For use on stainless steel and glass lined equipment, Mixmaster with CLIP™ seal on the outboard, optional inboard CLIP™ when running conditions allow. All Mixmaster VII's have the modular option of an outboard cartridge Lip seal design using AESSEAL® CLIP™ seal technology. A popular choice in the Mixmaster configuration, due to the integral bearing support, the CLIP™ seal runs on an extended and hardened inner barrel and may be offered in a FDA compliant material.

## Environmental Control Systems For Mixer Seals

In addition to a vast range of mechanical seals, AESSEAL® also has a comprehensive range of seal support systems and bearing protection devices for all your sealing needs.

The systems below are compatible with a wide selection of barrier and buffer fluid media. They are supplied pre-assembled with all necessary components and fittings. On site inventory costs are reduced by modular system construction. For more information go to [www.aesseal.com/systems](http://www.aesseal.com/systems)
