Installation

**Will it  
work  
properly  
in my  
plant?**

# Will it work properly in my plant?

We do not finish until the system works properly at your site. Before installation we visit your site for a pre-inspection check to evaluate the installation and needs.

We always consult you in advance and we handle everything from assessment to full installation. During the pre-inspection we look at all the parameters in order to provide and complete the full installation, service and repair - on-time.

Included in the installation is laser alignment, test run, measure of the flow and pressure as well as documentation.

Inspection

Our complete portfolio of services includes:

## Installation

Installation including laser alignment test run, measure of flow/pressure, electrical connection, documentation

- We can also check bearing temperatures

## Commissioning

- Pre-testing in workshop (product preparation and verification, oil level, test run, flow/pressure test)
- Prolonged warranty check-up after 12 months operation
