## AxFlow Systems - working with you from concept to completion

- Step 1: **The Concept.**  
We design pipework and instrumentation according to your requirements and with our expertise and experience to develop drawings of our concept.
- Step 2: **Selection.**  
We select the best pump for the job.
- Step 3: **Agreement.**  
Together we agree on design and produce a general arrangement drawing. Make any modification or design changes before proceeding to build.
- Step 4: **Completion.**  
Compile manufacturing schedule, build system, conduct factory acceptance test, and produce documentation, certification, deliver and commission.
- Step 5: **Service.**  
We make sure your system works!  
Always.

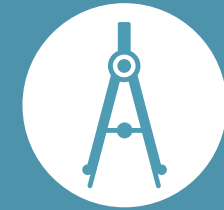

*fluidity.*  
**nonstop**

*fluidity.nonstop*<sup>®</sup> is our promise and our commitment to a level of service and expertise the like of which has never been seen before. We are Europe's leading source of pumps and pump expertise for the process industry and we intend to maintain that position by working fluidly, and ceaselessly to bring you the best.

Systems design

Do you  
supply  
complete  
systems?

# Do you supply complete systems?

Yes, AxFlow is a solution provider. We supply pump assemblies as well as complete custom made systems. From easy skid-based solutions right up to highly complex, critical and ground-breaking systems that require months to fine tune. We consider the totality of your production problem and break it down into functions rather than just components.

It means looking both at existing and at new processes with fresh eyes. Then it requires examination of how efficiently each function is performing and how well it serves its purpose, rather than concentrating just on the specifications of the individual components.

## System design and engineering solution

With our system design and engineering solution we not only provide pumps and spare parts but complete process solutions. We work in many different industry segments such as oil, gas, pharmaceutical, waste water, food and chemicals.

We're – one point of contact, one source of documentation, one design-, installation- and engineering team.

Our complete portfolio of services includes:

## Benefits:

- **Design.** We manage the project. You have only ONE point of contact, no need for complex and time consuming procurement process.
- **Construction.** We develop a complete solution in-house and have the key components on stock for short time delivery.
- **Installation.** We don't finish until the system works properly at your site.
- **Certification and documentation.** Naturally all the products and system we offer are certified according to the CE, EHEDG and ATEX standard and come with all documentation such as manuals, drawings, specifications etc.
- **Quality.** Each installation consists of market leading quality products and components, and we have many references to prove the quality.
- **In-house assembly.**
- **Experience.** We have more than 50 years of pumping experience and supply pumps from leading manufacturers of centrifugal pumps and positive displacement pumps and instruments and much more.

## Small, Medium, Large - It's not about size, it's about the perspective!
